-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kimura et al. (US Patent 4,036,600). Kimura et al. discloses a method for manufacturing steel including pre-straining a steel plate by tensile forces acting along one axis; wherein pre-straining comprises a skin pass mill process on the steel plate, and the skin pass process comprises a reduction rate between about 1.8% to about 2.0% when a cold-rolled steel plate is fabricated (“skin pass rolling with a reduction rate of thickness of 2%”, Column 3, lines 67-68); performing a press process (press rolling, Column 2, line 68) with respect to the steel plate and enhancing yield strength of the steel plate based on an increase in the degree of work-hardening (“increase hardness of the steel sheet”, Column 3, line 5).
